For Immediate Release

GREENWASHING AFFECTS 98% OF PRODUCTS INCLUDING TOYS, BABY PRODUCTS AND COSMETICS

Study Finds New Greenwashing Sin: 'Worshipping False Labels'

READING, PA – APRIL 15, 2009 – Your eyes aren't deceiving you, but the labels might be. There are more products claiming to be green on the shelves of stores these days, however those 'all-natural' and 'organic' products are likely committing at least one of the **Seven Sins of Greenwashing**, by not telling the complete truth. Between 2007 and 2009, the in-store availability of so-called 'green' products has increased between 40% and 176%, with 98% of products surveyed still committing at least one Sin of Greenwashing, according to a report on the **Seven Sins of Greenwashing** released today by TerraChoice Environmental Marketing.

Greenwashing is defined as the act of misleading consumers regarding the environmental practices of a company or the environmental benefits of a product or service.

Greenwashing is changing in creative ways. As a result, a new sin has been identified and added to the original 2007 *Six Sins of Greenwashing*. The '**Sin of Worshipping False Labels**' means that some marketers are mimicking third-party environmental certifications on their products to entice consumers to buy. The full report and handy consumer tips can be found at: www.sinsofgreenwashing.org.

"The good news is that the growing availability of green products shows that consumers are demanding more environmentally responsible choices, and that marketers and manufacturers are listening", said Scot Case, Vice President of TerraChoice.. "The bad news is that TerraChoice's survey of 2,219 consumer products in the U.S. and Canada shows that 98% committed at least one Sin of Greenwashing and that some marketers are exploiting consumers' demand for third-party certification by creating fake labels or false suggestions of third-party endorsement. Despite the number of legitimate eco-labels out there, consumers will still have to remain vigilant in their green purchasing decisions".

The **Seven Sins of Greenwashing**, from most common to least common, are:

1. The **Sin of the Hidden Trade-Off** occurs when one environmental issue is emphasized at the expense of potentially more serious concerns. In other words, when marketing hides a trade-off between environmental issues. Paper, for example, is not necessarily environmentally-preferable just because it comes from a sustainably-harvested forest.
2. The **Sin of No Proof** happens when environmental assertions are not backed up by evidence or third-party certification. One common example is facial tissue products that claim various percentages of post-consumer recycled content without providing any supporting details.
3. The **Sin of Vagueness** occurs when a marketing claim is so lacking in specifics as to be meaningless. 'All-natural' is an example of this Sin. Arsenic, uranium, mercury, and formaldehyde are all naturally occurring, and poisonous. "All natural" isn't necessarily 'green'.
4. The (new) **Sin of Worshipping False Labels** is when marketers create a false suggestion or certification-like image to mislead consumers into thinking that a product has been through a legitimate green certification process. One example of this Sin is a brand of aluminum foil with certification-like images that show the name of the company's own in-house environmental program for which there is no explanation.

5. The **Sin of Irrelevance** arises when an environmental issue unrelated to the product is emphasized. One example is the claim that a product is 'CFC-free', since CFCs are banned by law.
6. The **Sin of Lesser of Two Evils** occurs when an environmental claim makes consumers feel 'green' about a product category that is itself lacking in environmental benefits. Organic cigarettes are an example of this Sin.
7. The **Sin of Fibbing** is when environmental claims are outright false. One common example is products falsely claiming to be Energy Star certified.

"In our **2009 Seven Sins of Greenwashing Report**, we focused on children's toys, baby products, cosmetics, and cleaning products, because these product categories are the most susceptible to greenwashing and are of particular concern to consumers who want to ensure what they buy is safe for their families and are environmentally responsible," said Case.

The report also investigated the state of greenwashing in the United Kingdom and Australia, including examining almost 1,000 products in each of these two countries, revealing that greenwashing is an international challenge.

"The final piece of good news is that eco-labeling is on the rise", added Case. "Legitimate eco-labeling is nearly twice as common as it was in our 2007 survey, increasing from 13.7% to 23.4% on all 'green' products. The 2009 **Seven Sins of Greenwashing** report demonstrates that consumers do have greener choices in products but that they need to recognize the legitimate labels and ask questions of unfamiliar ones".

About the Study

In November 2008 through January 2009, TerraChoice researchers were sent into category-leading 'big box' retailers in the United States, Canada, the United Kingdom, and Australia with instructions to record every product making an environmental claim. For each, the researchers recorded product details, claim(s) details, any supporting information, and any explanatory detail or offers of additional information or support.

In the United States and Canada, a total of 2,219 'green' products - products that can be found in every American household - were recorded. These claims were tested against best practices, notably against guidelines provided by the U.S. Federal Trade Commission, Canadian Competition Bureau, Australian Consumer and Competition Commission, and the ISO 14021 standard for environmental labeling.

About TerraChoice Environmental Marketing

As North America's premier environmental marketing firm, TerraChoice Environmental Marketing helps grow the world's most sustainable companies. TerraChoice's consulting practice converts knowledge of environmental science, markets, and marketing into winning, client-centered solutions to help sustainability leaders deliver results.
